### Email Config

Email Configuration

Email 'FROM' name  
Viralist

Email 'FROM' email  
hello@viralist.io

Common email footer message. To be appended to all emails sent to users.  
Thank you!  
Viralist

Email delivery method  
PHP-mail-function

If you choose SMTP, add the SMTP details in the fields starting with 'SMTP' below. If you choose 'PHP-mail-function', the SMTP details are not needed.

The list config page contains all the configuration related to lists.

The configuration options are:

1. Email 'FROM' name
2. Email 'FROM' email ID
3. **Common email footer message. To be appended to all emails sent to users.**  
Will be appended to whatever email sent to users by Viralist. Perfect for a thank you message or contact info.
4. **Email delivery method**  
This option lets you chose between the methods by which emails are sent by Viralist.  
**SMTP:**  
We recommend using a email service like Mailgun or Mandrill which offers free email upto 10000 per month and are really reliable.  
Mailgun and Mandrill will provide you **SMTP details** that you can use to configure the mail settings.  
However you can use your gmail account's SMTP settings which has some limitations in number of email sent per day.  
**PHP mail() function:**  
We do not recommend using the "PHP mail() function" method as it might land up in the spam folders of your users' email.
5. The SMTP settings if you chose "SMTP" for the above option.
6. 'Email confirmation' mail subject (Sent to users when they sign up with email))

7. 'Email confirmation' mail template (Sent to users when they sign up with email)  
**You must** include the text '[ConfirmationLink]' in the message which will be replaced with the confirmation link before Viralist sends the email. If you don't include it, the users will not be able to confirm their email and login.
